| <b>Project Name</b>  | Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer |
| <b>Maximum Marks</b> | 2 Marks                                                                           |

#### Problem – Solution Fit Template:

The Problem-Solution Fit means the problem found with the customer is genuinely solved by the proposed solution.  
Purpose:

- Solve complex problems in a way that fits the state of the customer.
- Succeed faster and increase solution adoption by tapping into existing behaviour.
- Sharpen communication with the right triggers and messaging.
- Increase touch-points by finding the right problem-behaviour fit and building trust.
- Understand the existing situation in order to improve it for the target group.

#### Problem – Solution Fit Canvas

|                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1. CUSTOMER SEGMENT(S)</b><br>Employees requesting a standard laptop (new hires and replacement cases), and the internal IT Hardware/Support team who configure it.                  | <b>6. CUSTOMER CONSTRAINTS</b><br>Limited IT staff bandwidth; approvals depend on manager availability; no dedicated status-tracking tool outside ServiceNow; hardware stock levels can vary.                                                                                                                | <b>5. AVAILABLE SOLUTIONS</b><br>Manual email/chat handoff from IT procurement to the Hardware team, verbal follow-ups, or spreadsheet tracking — none integrated with the approval step.          |
| <b>2. JOBS-TO-BE-DONE / PROBLEMS</b><br>Get a fully configured standard laptop to the employee as quickly as possible after approval, without anyone manually chasing status.           | <b>9. PROBLEM ROOT CAUSE</b><br>The Service Catalog request has no automated link to a Hardware team task — creation and assignment currently depend on someone remembering to notify the team.                                                                                                              | <b>7. BEHAVIOUR</b><br>Employees email/message IT for updates; procurement manually pings the Hardware team; the team configures laptops in the order they hear about them, not by approval order. |
| <b>3. TRIGGERS</b><br>A new-hire record appears in HR onboarding; a manager requests a replacement; a request sits unassigned for days, prompting a follow-up email.                    | <b>10. YOUR SOLUTION</b><br>A Flow Designer flow that automatically creates and assigns a hardware configuration task the moment a standard laptop request is approved, updates the request stage automatically, and notifies the requester when the laptop is ready — removing the manual handoff entirely. | <b>8. CHANNELS OF BEHAVIOUR —</b><br><b>8.1 ONLINE</b><br>ServiceNow Employee Center (submit/track request), email / in-app notifications, Agent Workspace (Hardware team's task queue).           |
| <b>4. EMOTIONS: BEFORE / AFTER</b><br>Before: frustrated, unproductive, unsure who to follow up with. After: confident the request is progressing and able to start work without delay. |                                                                                                                                                                                                                                                                                                              | <b>8.2 OFFLINE</b><br>Physical laptop handover/pickup at the IT desk; manager verbal approval discussions.                                                                                         |
