

Project Design Phase

Proposed Solution Template

Date	24 September 2026
Team ID	SWTID-2026-9408
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

The project team's proposed solution is summarized below:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	IT procurement lacks an automated way to generate and assign hardware configuration tasks for standard laptop orders, causing delays, manual overhead, and inconsistent turnaround for both employees and the IT team.
2.	Idea / Solution description	A ServiceNow Flow Designer automation that, the moment a Standard Laptop Request is approved, automatically creates and assigns a hardware configuration task to the Hardware team, updates the request status at each stage, and notifies the requester and Hardware team accordingly.
3.	Novelty / Uniqueness	Uses ServiceNow's native, no-code Flow Designer to remove a purely manual handoff step, with built-in SLA escalation and automatic asset registration in the CMDB — no custom scripting or external integration required.
4.	Social Impact / Customer Satisfaction	Reduces new-employee onboarding delays and IT team workload, improving first-day productivity and employee satisfaction with IT services, while freeing the procurement team from manual follow-up.
5.	Business Model (Revenue Model)	This is an internal IT efficiency solution rather than a revenue-generating product. Value is realized through cost-avoidance: fewer manual hours on request handoffs, faster laptop turnaround, and lower risk of missed or delayed configurations.
6.	Scalability of the Solution	Built using reusable Flow Designer subflows and standard ServiceNow tables, the same pattern can be extended to other standard hardware/software requests (monitors, licenses, mobile devices) and scaled across departments or locations with minimal rework.
